What Is School Finance Equity and Why Does It Matter?

School finance equity is an essential component of educational equity. In an equitable system, public schools receive funds to provide a high-quality education for all based on the needs of students, not on the property wealth of communities.

Across the U.S., almost no states have fully achieved this goal.

Inequity in school finance thwarts countless efforts to improve educational outcomes. We know that certain groups of students, such as students with disabilities, low-income students, and English language learners, need additional resources and support in school.² Yet in only nine states do high-poverty districts receive at least 10% more funding than low-poverty districts.³

Funding inequity also disproportionately affects students of color. Districts serving the largest populations of Black, Latino, or Native American students received 16% less funding per student in state and local funding than those serving the fewest students of color.⁴

Achieving both adequacy (enough funding) and equity (funding distributed to where it is most needed) in school finance will not solve every educational problem, but it is a significant part of solving deeply rooted challenges.

“The longstanding and persistent reality is that vast funding inequities in our state public education systems render the education available to millions of American public school students profoundly unequal.”

—U.S. COMMISSION ON CIVIL RIGHTS, 2018¹
Money Matters

Schools with more resources can do more for their students. Some students need additional resources and supports to achieve their best. But for a long time, researchers found no clear correlations between school spending and overall student achievement.5

Recent research has used lawsuits and policy changes to measure student outcomes before and after large-scale funding changes. These studies suggest more money does improve student outcomes, including significantly improved test scores, graduation rates, and college-going rates, especially for low-income students.6

- Increasing school spending by $1,000 per student increased graduation rates by 1.9 percentage points and college-going rates by 2.7 percentage points.7

- Effects of school finance reforms on student achievement in lower-income districts accumulates for at least a decade after the reform and can help close achievement gaps between lower-income and middle-income districts.8

- Raising state funding for low-income districts translates to higher rates of educational attainment in high school and beyond, especially for Black students, and higher earnings in adulthood.9

Evaluating school spending and student achievement in the real world is messy and complex. Even with evolving research, we believe that adequate and equitable funding will make a difference in learning, especially for students most in need of extra educational support.

But How Money Is Spent Also Matters

One factor complicating school spending research is that not all types of spending have similar effects. The most “effective” use for money depends on context, student needs, and measures of success.10

Imagine two schools each get an additional $100,000. School One enhances its facilities, while School Two hires an additional teacher for students with disabilities. School Two’s teacher investment could have a more direct impact on student learning, especially for historically underserved students. But if the facilities investment prevents School One’s roof from collapsing, that also benefits the learning environment. Both kinds of expenditures have merit, but their effects are not felt in the same way.

Questions for Advocates

- How adequate and equitable is your state’s school finance system?

- What data can you use to show how state funding lines up with student needs, especially for low-income students, students with disabilities, and English language learners?

- What would need to change in your state to improve state school finance equity?
Endnotes

About Bellwether

Bellwether is a national nonprofit that exists to transform education to ensure systemically marginalized young people achieve outcomes that lead to fulfilling lives and flourishing communities. Founded in 2010, we work hand in hand with education leaders and organizations to accelerate their impact, inform and influence policy and program design, and share what we learn along the way. For more, visit bellwether.org.

About the Authors

INDIRA DAMMU
Indira Dammu is an associate partner at Bellwether in the Policy and Evaluation practice area. She can be reached at indira.dammu@bellwether.org.

BONNIE O’KEEFE
Bonnie O’Keefe is a senior associate partner at Bellwether in the Policy and Evaluation practice area. She can be reached at bonnie.okeefe@bellwether.org.

JENNIFER O’NEAL SCHIESS
Jennifer O’Neal Schiess is a senior partner at Bellwether and leads the Policy and Evaluation practice area. She can be reached at jennifer.schiess@bellwether.org.
